

## Lecture 30 of 41

### Animation 3 of 3: Inverse Kinematics Control & Ragdoll Physics

William H. Hsu

Department of Computing and Information Sciences, KSU

KSOL course pages: <http://bit.ly/hGvXIH> / <http://bit.ly/eVizrE>

Public mirror web site: <http://www.kddresearch.org/Courses/CIS636>

Instructor home page: <http://www.cis.ksu.edu/~bhsu>

#### Readings:

Last class: **Particle System Handout**

Today: §5.3, Eberly 2<sup>e</sup> – see <http://bit.ly/ieUq45>; **CGA Handout**

Next class: Chapter 14, Eberly 2<sup>e</sup>

Reference: Wikipedia, *Inverse Kinematics*, <http://bit.ly/hr8r2u>

Reference: Wikipedia, *Ragdoll Physics*, <http://bit.ly/3oggUZ>

2

## Lecture Outline

- Reading for Last Class: **Particle System Handout**
- Reading for Today: §5.3, Eberly 2<sup>e</sup>; **CGA Handout**
- Reading for Next Class: Chapter 14, Eberly 2<sup>e</sup>
- Last Time: Lab on Particle Systems; Dissection of Working Program
- Today: Animation Part 3 of 3 – Inverse Kinematics
  - \* Autonomous agents (robots, swarms) vs. hand-animated movement
  - \* Forward kinematics and control
  - \* Inverse kinematics for autonomous movement in robotics
  - \* Jacobians and iterative minimization models
  - \* Rag doll physics
- End of Material on: Particle Systems, Collisions, CGA
- Also Conclusion of Physically-Based Modeling (PBM)
- Next Class: Ray Tracing, Part 1 of 2
  - \* Vectors: light/shadow (L), reflected (R), transmitted/refracted (T)
  - \* Basic recursive ray tracing: ray trees

## Where We Are

21	Lab 4a: Animation Basics	Flash animation handout
22	Animation 2: Rotations; Dynamics, Kinematics	Chapter 17, esp. §17.1 – 17.2
23	Demos 4: Modeling & Simulation; Rotations	Chapter 10 <sup>1</sup> , 13 <sup>2</sup> , §17.3 – 17.5
24	Collisions 1: axes, OBBs, Lab 4b	§2.4.3, 8.1, GL handout
25	Spatial Sorting: Binary Space Partitioning	Chapter 6, esp. §6.1
26	Demos 5: More CGA; Picking; HW/Exam	Chapter 7 <sup>3</sup> ; § 8.4
27	Lab 5a: Interaction Handling	§ 8.3 – 8.4; 4.2, 5.0, 5.6, 9.1
28	Collisions 2: Dynamic, Particle Systems	§ 9.1, particle system handout
	Exam 2 review: Hour Exam 2 (evening)	Chapters 5 – 6, 7 <sup>4</sup> – 8, 12, 17
29	Lab 5b: Particle Systems	Particle system handout
30	Animation 3: Control & IK	§ 5.3, CGA handout
31	Ray Tracing 1: intersections, ray trees	Chapter 14
32	Lab 6a: Ray Tracing Basics with POV-Ray	RT handout
33	Ray Tracing 2: advanced topic survey	Chapter 15, RT handout
34	Visualization 1: Data (Quantities & Evidence)	Tufte handout (1)
35	Lab 6b: More Ray Tracing	RT handout
36	Visualization 2: Objects	Tufte handout (2 & 4)
37	Color Basics; Term Project Prep	Color handout
38	Lab 7: Fractals & Terrain Generation	Fractals/Terrain handout
39	Visualization 3: Processes; Final Review 1	Tufte handout (3)
40	Project presentations 1; Final Review 2	–
41	Project presentations 2	–
	Final Exam	Ch. 1 – 8, 10 – 15, 17, 20

Lightly-shaded entries denote the due date of a written problem set; heavily-shaded entries, that of a machine problem (programming assignment); blue-shaded entries, that of a paper review; and the green-shaded entry, that of the term project.

Green, blue and red letters denote exam review, exam, and exam solution review dates.

## Acknowledgements: Inverse Kinematics

## Review [1]: Uses of Particle Systems

- **Explosions**
  - \* Large
  - \* Fireworks
- **Fire**
- **Vapor**
  - \* Clouds
  - \* Dust
  - \* Fog
  - \* Smoke
  - \* Contrails
- **Water**
  - \* Waterfalls
  - \* Streams
- **Plants**

## Review [3]: Definition & Physically-Based Model

- A particle system is a collection of a number of individual elements or *particles*.
- *Particle systems control a set of particles that act autonomously but share some common attributes.*
- Particle is a point in 3D space.
- Forces (e.g. gravity or wind) accelerate a particle.
- Acceleration changes velocity.
- Velocity changes position

Adapted from slides ♥ 2008 R. Malhotra, CSU San Marcos  
CS 536 Intro to 3-D Game Graphics, Spring 2008 – <http://bit.ly/hNhUuE>

California State University  
SAN MARCOS

## Review [4]: More Attributes of Particles

- Position
- Velocity
- Life Span
- Size
- Weight
- Representation
- Color
- Owner

Adapted from slides ♥ 2008 R. Malhotra, CSU San Marcos  
CS 536 Intro to 3-D Game Graphics, Spring 2008 – <http://bit.ly/hNhUuE>

California State University  
SAN MARCOS

## Review [5]: Four Ways to Represent Particles

- Points
- Lines
- Texture-mapped quads
- Point Sprites

Adapted from slides ♥ 2008 R. Malhotra, CSU San Marcos  
CS 536 Intro to 3-D Game Graphics, Spring 2008 – <http://bit.ly/hNhUuE>

California State University  
SAN MARCOS

## Kinematics

- The study of object movements  
irrespective of their speed or style of  
movement

Adapted from slides ♥ 2000 – 2005 D. Brogan, University of Virginia  
CS 551, Advanced CG & Animation – <http://bit.ly/hUXrqd>

Computer Science  
at the UNIVERSITY of VIRGINIA

11

## Degrees of Freedom (DOFs) [1]: Translational & Rotational

- The variables that affect an object's orientation
- How many degrees of freedom when flying?
- So the kinematics of this airplane permit movement anywhere in three dimensions
- Six
  - x, y, and z positions
  - roll, pitch, and yaw

Adapted from slides ♥ 2000 – 2005 D. Brogan, University of Virginia  
CS 551, Advanced CG & Animation – <http://bit.ly/hUXrqd>

Computer Science  
at the UNIVERSITY of VIRGINIA

CIS 536/636

Introduction to Computer Graphics

Lecture 30 of 41

Computing & Information Sciences  
Kansas State University

12

## Degrees of Freedom (DOFs) [2]: Robot Arm

- How about this robot arm?

- Six again
  - 2-base, 1-shoulder, 1-elbow, 2-wrist

Adapted from slides ♥ 2000 – 2005 D. Brogan, University of Virginia  
CS 551, Advanced CG & Animation – <http://bit.ly/hUXrqd>

Computer Science  
at the UNIVERSITY of VIRGINIA

CIS 536/636

Introduction to Computer Graphics

Lecture 30 of 41

Computing & Information Sciences  
Kansas State University

13

## Configuration Space

- The set of all possible positions (defined by kinematics) an object can attain

Adapted from slides ♥ 2000 – 2005 D. Brogan, University of Virginia  
CS 551, Advanced CG & Animation – <http://bit.ly/hUXrqd>

Computer Science  
at the UNIVERSITY of VIRGINIA

CIS 536/636

Introduction to Computer Graphics

Lecture 30 of 41

Computing & Information Sciences  
Kansas State University

14

## Work Space vs. Configuration Space

- Work space
  - The space in which the object exists
  - Dimensionality
    - $R^3$  for most things,  $R^2$  for planar arms
- Configuration space
  - The space that defines the possible object configurations
  - Degrees of Freedom
    - The number of parameters that necessary and sufficient to define position in configuration

Adapted from slides ♥ 2000 – 2005 D. Brogan, University of Virginia  
CS 551, Advanced CG & Animation – <http://bit.ly/hUXrqd>

Computer Science  
at the UNIVERSITY of VIRGINIA

CIS 536/636

Introduction to Computer Graphics

Lecture 30 of 41

Computing & Information Sciences  
Kansas State University

## More Examples

- A point on a plane
- A point in space
- A point moving on a line in space

Adapted from slides ♥ 2000 – 2005 D. Brogan, University of Virginia  
CS 551, Advanced CG & Animation – <http://bit.ly/hUXrqd>

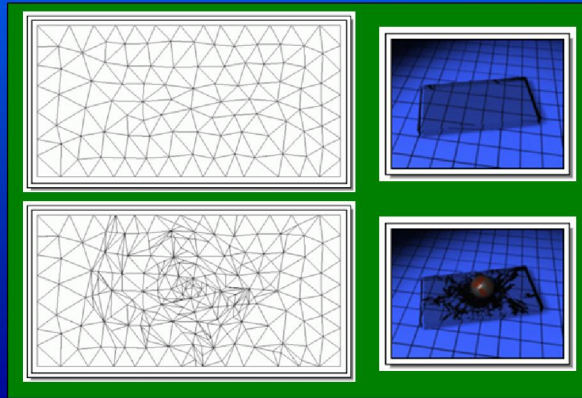

Computer Science  
at the UNIVERSITY of VIRGINIA

## Controlled DOFs

- DOFs that you can actually control (position explicitly)

Adapted from slides ♥ 2000 – 2005 D. Brogan, University of Virginia  
CS 551, Advanced CG & Animation – <http://bit.ly/hUXrqd>

Computer Science  
at the UNIVERSITY of VIRGINIA

## Hierarchical Kinetic Modeling

- A family of parent-child spatial relationships are functionally defined
  - Moon/Earth/Sun movements
  - Articulations of a humanoid
- Limb connectivity is built into model (joints) and animation is easier

Adapted from slides ♥ 2000 – 2005 D. Brogan, University of Virginia  
CS 551, Advanced CG & Animation – <http://bit.ly/hUXrqd>

Computer Science  
at the UNIVERSITY of VIRGINIA

## Robot Parts & Terms

- Links
- End effector
- Frame
- Revolute Joint
- Prismatic Joint

Adapted from slides ♥ 2000 – 2005 D. Brogan, University of Virginia  
CS 551, Advanced CG & Animation – <http://bit.ly/hUXrqd>

Computer Science  
at the UNIVERSITY of VIRGINIA

19

## Example: Puma 560 Robot

The PUMA 560 has **SIX** revolute joints  
A revolute joint has **ONE** degree of freedom ( 1 DOF) that is defined by its angle

Wikipedia, *Programmable Universal Machine for Assembly (PUMA)*: <http://bit.ly/fBMRaM>

Adapted from slides ♥ 2002 R. Melamud, Stanford University  
Mirrored at CMU 16-311 Introduction to Robotics, <http://generalrobotics.org>

20

## Joint Types: Revolute, Prismatic, Spherical

Revolute Joint  
1 DOF ( Variable -  $\theta$  )

Prismatic Joint  
1 DOF (linear) (Variables -  $d$  )

Spherical Joint  
3 DOF ( Variables -  $\theta_1, \theta_2, \theta_3$  )

Adapted from slides ♥ 2002 R. Melamud, Stanford University  
Mirrored at CMU 16-311 Introduction to Robotics, <http://generalrobotics.org>

21

## More Complex Joints

- 3 DOF joints
  - Gimbal
  - Spherical (doesn't possess singularity)
- 2 DOF joints
  - Universal

Adapted from slides ♥ 2000 – 2005 D. Brogan, University of Virginia  
CS 551, Advanced CG & Animation – <http://bit.ly/hUXrqd>

Computer Science  
at the UNIVERSITY of VIRGINIA

CIS 536/636

Introduction to Computer Graphics

Lecture 30 of 41

Computing & Information Sciences  
Kansas State University

22

## Hierarchical Representation

- Model bodies (links) as nodes of a tree
- All body frames are local (relative to parent)
  - Transformations affecting root affect all children
  - Transformations affecting any node affect all its children

Adapted from slides ♥ 2000 – 2005 D. Brogan, University of Virginia  
CS 551, Advanced CG & Animation – <http://bit.ly/hUXrqd>

Computer Science  
at the UNIVERSITY of VIRGINIA

CIS 536/636

Introduction to Computer Graphics

Lecture 30 of 41

Computing & Information Sciences  
Kansas State University

## Forward vs. Inverse Kinematics

- Forward Kinematics
  - Compute configuration (pose) given individual DOF values
- Inverse Kinematics
  - Compute individual DOF values that result in specified end effector position

Adapted from slides ♥ 2000 – 2005 D. Brogan, University of Virginia  
CS 551, Advanced CG & Animation – <http://bit.ly/hUXrqd>

Computer Science  
at the UNIVERSITY of VIRGINIA

## Forward Kinematics [1]: Definition & General Approach

- Traverse kinematic tree and propagate transformations downward
  - Use stack
  - Compose parent transformation with child's
  - Pop stack when leaf is reached
- High DOF models are tedious to control this way

Adapted from slides ♥ 2000 – 2005 D. Brogan, University of Virginia  
CS 551, Advanced CG & Animation – <http://bit.ly/hUXrqd>

Computer Science  
at the UNIVERSITY of VIRGINIA

25

## Forward Kinematics [2]: Illustration

$$\vec{x} = f(\vec{\theta})$$

Choi

$$\mathbf{e} = f(\Phi)$$

Rotenberg

Adapted from slides ♥ 2002 K. J. Choi, Seoul National University  
Graphics and Media Lab (<http://graphics.snu.ac.kr>) – mirrored at: <http://bit.ly/hnzSAN>

CIS 536/636

Introduction to Computer Graphics

Lecture 30 of 41

Computing & Information Sciences  
Kansas State University

26

## Forward Kinematics [3]: Joint Angles to Bone Coordinates

- The local and world matrix construction within the skeleton is an implementation of *forward kinematics*
- Forward kinematics refers to the process of computing world space geometric descriptions (matrices...) based on joint DOF values (usually rotation angles and/or translations)

Adapted from slides ♥ 2004 – 2005 S. Rotenberg, UCSD  
CSE169: Computer Animation, Winter 2005 – <http://bit.ly/f0ViAN>

CIS 536/636

Introduction to Computer Graphics

Lecture 30 of 41

Computing & Information Sciences  
Kansas State University

## Inverse Kinematics [1]: Definition & General Approach

- Given end effector position, compute required joint angles
- In simple case, analytic solution exists
  - Use trig, geometry, and algebra to solve

Adapted from slides ♥ 2000 – 2005 D. Brogan, University of Virginia  
CS 551, Advanced CG & Animation – <http://bit.ly/hUXrqd>

Computer Science  
at the UNIVERSITY of VIRGINIA

## Inverse Kinematics [2]: Illustration

For more on characters & IK, see:  
Advanced Topics in CG Lecture 05

$$\vec{\theta} = f^{-1}(\vec{x}) \quad \Phi = f^{-1}(\mathbf{e})$$

Choi

Rotenberg

<http://youtu.be/yvRBWIRAPsE>

## Inverse Kinematics [4]: Analytic Solution for 2-Link Case

$$x^2 + y^2 = a_1^2 + a_2^2 - 2a_1a_2 \cos(\pi - \theta_2)$$

$$\cos \theta_2 = \frac{x^2 + y^2 - a_1^2 - a_2^2}{2a_1a_2}$$

for greater accuracy

$$\tan^2 \frac{\theta_2}{2} = \frac{1 - \cos \theta}{1 + \cos \theta} = \frac{2a_1a_2 - x^2 - y^2 + a_1^2 + a_2^2}{2a_1a_2 + x^2 + y^2 - a_1^2 - a_2^2}$$

$$= \frac{(a_1^2 + a_2^2)^2 - (x^2 + y^2)^2}{(x^2 + y^2)^2 - (a_1^2 - a_2^2)^2}$$

$$\theta_2 = \pm 2 \tan^{-1} \sqrt{\frac{(a_1^2 + a_2^2)^2 - (x^2 + y^2)^2}{(x^2 + y^2)^2 - (a_1^2 - a_2^2)^2}}$$

Two solutions: elbow up & elbow down

31

## Inverse Kinematics [5]: Iterative IK Solutions

- Frequently analytic solution is infeasible
- Use **Jacobian**
- Derivative of function output relative to each of its inputs
- If  $y$  is function of three inputs and one output

$$y = f(x_1, x_2, x_3)$$

$$\delta y = \frac{\partial f}{\partial x_1} \cdot \delta x_1 + \frac{\partial f}{\partial x_2} \cdot \delta x_2 + \frac{\partial f}{\partial x_3} \cdot \delta x_3$$

- Represent Jacobian  $J(X)$  as a 1x3 matrix of partial derivatives

Adapted from slides ♥ 2000 – 2005 D. Brogan, University of Virginia  
CS 551, Advanced CG & Animation – <http://bit.ly/hUXrqd>

Computer Science  
at the UNIVERSITY of VIRGINIA

CIS 536/636

Introduction to Computer Graphics

Lecture 30 of 41

Computing & Information Sciences  
Kansas State University

32

## Jacobian [1]: 6x6 DOF Case

- In another situation, end effector has 6 DOFs and robotic arm has 6 DOFs
- $f(x_1, \dots, x_6) = (x, y, z, r, p, y)$
- Therefore  $J(X) = 6 \times 6$  matrix

$$\begin{bmatrix} \frac{\partial f_x}{\partial x_1} & \frac{\partial f_y}{\partial x_1} & \frac{\partial f_z}{\partial x_1} & \frac{\partial f_r}{\partial x_1} & \frac{\partial f_p}{\partial x_1} & \frac{\partial f_y}{\partial x_1} \\ \frac{\partial f_x}{\partial x_2} & \frac{\partial f_y}{\partial x_2} & \frac{\partial f_z}{\partial x_2} & \frac{\partial f_r}{\partial x_2} & \frac{\partial f_p}{\partial x_2} & \frac{\partial f_y}{\partial x_2} \\ \frac{\partial f_x}{\partial x_3} & \frac{\partial f_y}{\partial x_3} & \frac{\partial f_z}{\partial x_3} & \frac{\partial f_r}{\partial x_3} & \frac{\partial f_p}{\partial x_3} & \frac{\partial f_y}{\partial x_3} \\ \frac{\partial f_x}{\partial x_4} & \frac{\partial f_y}{\partial x_4} & \frac{\partial f_z}{\partial x_4} & \frac{\partial f_r}{\partial x_4} & \frac{\partial f_p}{\partial x_4} & \frac{\partial f_y}{\partial x_4} \\ \frac{\partial f_x}{\partial x_5} & \frac{\partial f_y}{\partial x_5} & \frac{\partial f_z}{\partial x_5} & \frac{\partial f_r}{\partial x_5} & \frac{\partial f_p}{\partial x_5} & \frac{\partial f_y}{\partial x_5} \\ \frac{\partial f_x}{\partial x_6} & \frac{\partial f_y}{\partial x_6} & \frac{\partial f_z}{\partial x_6} & \frac{\partial f_r}{\partial x_6} & \frac{\partial f_p}{\partial x_6} & \frac{\partial f_y}{\partial x_6} \end{bmatrix}$$

Adapted from slides ♥ 2000 – 2005 D. Brogan, University of Virginia

Computer Science  
at the UNIVERSITY of VIRGINIA

CIS 536/636

Introduction to Computer Graphics

Lecture 30 of 41

Computing & Information Sciences  
Kansas State University

## Jacobian [2]: Solution

- Relates velocities in parameter space to velocities of outputs

$$\dot{Y} = J(X) \cdot \dot{X}$$

- If we know  $Y_{\text{current}}$  and  $Y_{\text{desired}}$ , then we subtract to compute  $Y_{\text{dot}}$
- Invert Jacobian and solve for  $X_{\text{dot}}$

Adapted from slides ♥ 2000 – 2005 D. Brogan, University of Virginia  
CS 551, Advanced CG & Animation – <http://bit.ly/hUXrqd>

Computer Science  
at the UNIVERSITY of VIRGINIA

## Another IK Problem: Revolute & Prismatic Joints Combined

Finding  $\theta$ :

$$\theta = \arctan\left(\frac{y}{x}\right)$$

More Specifically:

$$\theta = \arctan2\left(\frac{y}{x}\right)$$

**arctan2()** specifies  
that it's in the first  
quadrant

Finding  $S$ :

$$S = \sqrt{x^2 + y^2}$$

Adapted from slides ♥ 2002 R. Melamud, Stanford University  
Mirrored at CMU 16-311 Introduction to Robotics, <http://generalrobotics.org>

## Ragdoll Physics [1]: Definition

- **Type of Procedural Animation**
  - ✦ Automatically generates CGA directives (rotations)
  - ✦ Based on simulation
  - ✦ Rigid-body dynamics
- **Articulated Figure**
  - ✦ Gravity
  - ✦ No autonomous movement
  - ✦ Used for inert body
    - Usually: character death (car impact, falling body, etc.)
    - Less often: unconscious, paralyzed character
- **Collisions with Multiple Bodies**
  - ✦ Inter-character
  - ✦ Character-object

Falling Bodies © 1997 – 2001 Animats  
<http://www.animats.com>

## Ragdoll Physics [2]: Demos

37

## Physically-Based Modeling (PBM) [1]: Looking Back

- **Particle Dynamics**

- \* **Emitters**

- 0-D (points), 1-D (lines), 2-D (planes, discs, cross-sections)
    - e.g., fireworks (0-D); fountains (0/1/2-D); smokestacks, jets (2-D)

- \* **Simulation: birth-death process, functions of particle age/trajectory**

- **Rigid-Body Dynamics**

- \* **Constrained systems of connected parts**

- \* **Examples: falling rocks, colliding vehicles, rag dolls**

Rocks fall  
Everyone dies

- **Articulated Figures**

- **More References**

- \* **ACM, Intro to Physically-Based Modeling:** <http://bit.ly/hhQvXd>
- \* **Wikipedia, Physics Engine:** <http://bit.ly/h4PIRt>

## Summary

- Reading for Today: §5.3, Eberly 2<sup>e</sup>; **CGA Handout**
- Reading for Next Class: Chapter 14, Eberly 2<sup>e</sup>
- Last Class: Lab on Particle Systems; Dissection of Working Program
- Today: **Computer-Generated Animation Concluded**
  - \* **CGA of autonomous agents (robots, swarms) vs. animation by hand**
  - \* **Degrees of freedom (DOFs) and kinds of joints**
  - \* **Forward kinematics (FK)**
    - Forward problem illustrated
    - Control problem
  - \* **Inverse kinematics (IK)**
    - IK (finding angles) vs. mechanical problem of finding forces
    - Analytical models
    - Iterative models (Jacobian-based)
  - \* **Ragdoll physics**
- Next Class: Ray Tracing, Part 1 of 2

## Terminology

- **Emitter** – Point, Line, Plane or Region from which Particles Originate
- **Particle Fountain** – Particle System with Directional Emitter
- **Sprite** (Wikipedia: <http://bit.ly/gylnPg>)
  - \* **Definition:** 2-D image or animation made part of larger scene
  - \* **Point sprite** (Saar & Rotzler, 2008): <http://bit.ly/fkjBPY>
- **Joints:** Parts of Robot / Articulated Figure That Turn, Slide
  - \* **Revolute:** able to turn (rotate), forming angle between bones
  - \* **Prismatic (aka slider):** “bone” slides through – <http://bit.ly/hScjoe>
  - \* **Spherical (aka ball joint):** “bone” rotates around socket
  - \* **Cylindrical (aka hinge):** flaps wrap around joint, joined to surfaces
- **Effectors:** Parts of Robot / Articulated Figure That Act ( e.g., Hand, Foot)
- **Bones:** Effectors, Other Parts That Rotate about, Slide through Joints
- **Procedural Animation:** Automatic Generation of Motion *via* Simulation
  - \* **Ragdoll physics:** procedural animation for inert characters
  - \* **Other types:** particle systems, *N*-body dynamics
