

## Lecture 1 of 41

# Computer Graphics (CG) Basics: Transformation Matrices & Coordinate Systems

William H. Hsu

Department of Computing and Information Sciences, KSU

KSOL course pages: <http://bit.ly/hGvXIH> / <http://bit.ly/eVizrE>

Public mirror web site: <http://www.kddresearch.org/Courses/CIS636>

Instructor home page: <http://www.cis.ksu.edu/~bhsu>

### Readings:

Wikipedia: vectors (<http://bit.ly/eBrl09>), matrices (<http://bit.ly/fwpDwd>)

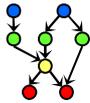

Sections 2.1 – 2.2, 13.2, 14.1 – 14.4, 17.1, Eberly 2<sup>e</sup> – see <http://bit.ly/ieUq45>

Appendices 1-4, Foley, J. D., VanDam, A., Feiner, S. K., & Hughes, J. F. (1991).  
*Computer Graphics, Principles and Practice, Second Edition in C.*

McCauley (Senocular.com) tutorial: <http://bit.ly/2yNPD>

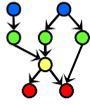

2

## Lecture Outline

- **CG Basics 1: Basic Precalculus and Linear Algebra for CG**
  - \* Matrices and vectors: definitions, basic operations
  - \* Vector spaces and affine spaces
  - \* Translation, Rotation, Scaling aka T, R, S transformations
  - \* Parametric equations (of lines, rays, line segments)
- **Importance to Computer Graphics**
  - \* Points as vectors, transformation matrices
  - \* Homogeneous coordinates
  - \* TRS in viewing/normalizing transformation
  - \* Intersections: clipping, ray tracing, etc.
- **Looking Forward**
  - \* The week ahead: Viewing (Part 1 of 4), Lab 0
  - \* Lab exercise: C/Linux, basic OpenGL setup (see KSOL)

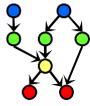

## Where We Are

Lecture	Topic	Primary Source(s)
0	Course Overview	Chapter 1, Eberly 2 <sup>e</sup>
1	<b>CG Basics: Transformation Matrices; Lab 0</b>	<b>Sections (§) 2.1, 2.2</b>
2	Viewing 1: Overview, Projections	§ 2.2.3 – 2.2.4, 2.8
3	Viewing 2: Viewing Transformation	§ 2.3 esp. 2.3.4; <a href="#">FVFF slides</a>
4	<b>Lab 1a: Flash &amp; OpenGL Basics</b>	<b>Ch. 2, 16<sup>1</sup>, <a href="#">Angel Primer</a></b>
5	Viewing 3: Graphics Pipeline	§ 2.3 esp. 2.3.7; 2.6, 2.7
6	Scan Conversion 1: Lines, Midpoint Algorithm	§ 2.5.1, 3.1; <a href="#">FVFF slides</a>
7	<b>Viewing 4: Clipping &amp; Culling; Lab 1b</b>	<b>§ 2.3.5, 2.4, 3.1.3</b>
8	Scan Conversion 2: Polygons, Clipping Intro	§ 2.4, 2.5 esp. 2.5.4, 3.1.6
9	Surface Detail 1: Illumination & Shading	§ 2.5, 2.6.1 – 2.6.2, 4.3.2, 20.2
10	<b>Lab 2a: Direct3D / DirectX Intro</b>	<b>§ 2.7, <a href="#">Direct3D handout</a></b>
11	Surface Detail 2: Textures; OpenGL Shading	§ 2.6.3, 20.3 – 20.4, <a href="#">Primer</a>
12	Surface Detail 3: Mappings; OpenGL Textures	§ 20.5 – 20.13
13	<b>Surface Detail 4: Pixel/Vertex Shad.; Lab 2b</b>	<b>§ 3.1</b>
14	Surface Detail 5: Direct3D Shading; OGLSL	§ 3.2 – 3.4, <a href="#">Direct3D handout</a>
15	Demos 1: CGA, Fun; Scene Graphs: State	§ 4.1 – 4.3, <a href="#">CGA handout</a>
16	<b>Lab 3a: Shading &amp; Transparency</b>	<b>§ 2.6, 20.1, <a href="#">Primer</a></b>
17	<b>Animation 1: Basics, Keyframes; HW/Exam</b>	<b>§ 5.1 – 5.2</b>
	<b>Exam 1 review: Hour Exam 1 (evening)</b>	<b>Chapters 1 – 4, 20</b>
18	<b>Scene Graphs: Rendering; Lab 3b: Shader</b>	<b>§ 4.4 – 4.7</b>
19	<b>Demos 2: SFX; Skinning, Morphing</b>	<b>§ 5.3 – 5.5, <a href="#">CGA handout</a></b>
20	Demos 3: Surfaces; B-reps/Volume Graphics	§ 10.4, 12.7, <a href="#">Mesh handout</a>

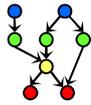

Lightly-shaded entries denote the due date of a written problem set; heavily-shaded entries, that of a machine problem (programming assignment); blue-shaded entries, that of a paper review; and the green-shaded entry, that of the term project.

Green, blue and red letters denote exam review, exam, and exam solution review dates.

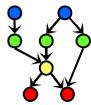

## Online Recorded Lectures for CIS 536/636 (Intro to CG)

- **Project Topics for CIS 536/636**
- **Computer Graphics Basics (10)**
  - \* 1. Mathematical Foundations – Week 1 - 2
  - \* 2. OpenGL Primer 1 of 3: Basic Primitives and 3-D – Weeks 2-3
  - \* 3. Detailed Introduction to Projections and 3-D Viewing – Week 3
  - \* 4. Fixed-Function Graphics Pipeline – Weeks 3-4
  - \* 5. Rasterizing (Lines, Polygons, Circles, Ellipses) and Clipping – Week 4
  - \* 6. Lighting and Shading – Week 5
  - \* 7. OpenGL Primer 2 of 3: Boundaries (Meshes), Transformations – Weeks 5-6
  - \* 8. Texture Mapping – Week 6
  - \* 9. OpenGL Primer 3 of 3: Shading and Texturing, VBOs – Weeks 6-7
  - \* 10. Visible Surface Determination – Week 8
- **Recommended Background Reading for CIS 636**
- **Shared Lectures with CIS 736 (Computer Graphics)**
  - \* Regular in-class lectures (30) and labs (7)
  - \* Guidelines for paper reviews – Week 6
  - \* Preparing term project presentations, CG demos – Weeks 11-12

## Background Expected

- **Both Courses**
  - \* Proficiency in C/C++ or *strong* proficiency in Java and ability to learn
  - \* Strongly recommended: matrix theory or linear algebra (e.g., Math 551)
  - \* At least 120 hours for semester (up to 150 depending on term project)
  - \* Textbook: *3D Game Engine Design, Second Edition* (2006), Eberly
  - \* Angel's *OpenGL: A Primer* recommended
- **CIS 536 & 636 Introduction to Computer Graphics**
  - \* Fresh background in precalculus: Algebra 1-2, Analytic Geometry
  - \* Linear algebra basics: matrices, linear bases, vector spaces
  - \* Watch background lectures
- **CIS 736 Computer Graphics**
  - \* Recommended: first course in graphics (background lectures as needed)
  - \* OpenGL experience helps
  - \* Read up on shaders and shading languages
  - \* Watch advanced topics lectures; see list before choosing project topic

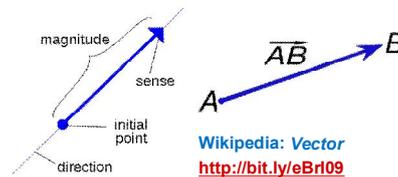

## Matrix and Vector Notation

- **Vector: Geometric Object with Length (Magnitude), Direction**
- **Vector Notation (General Form)**

- \* Row vector
- \* Column vector

$$\mathbf{v} = (v_1, v_2, \dots, v_{n-1}, v_n)$$

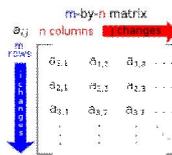

$$\mathbf{v} = \begin{bmatrix} v_1 \\ v_2 \\ \vdots \\ v_{n-1} \\ v_n \end{bmatrix}$$

Wikipedia: Vector  
<http://bit.ly/eBrl09>

- **Coordinates in  $\mathbb{R}^3$  (Euclidean Space)**
  - \* Cartesian (see <http://bit.ly/f5z1UC>)  $\mathbf{a} = (a_x, a_y, a_z)$
  - \* Cylindrical (see <http://bit.ly/qt5v3u>)  $\mathbf{v} = (r, \angle\theta, h)$
  - \* Spherical (see <http://bit.ly/f4CvMZ>)  $\mathbf{v} = (\rho, \angle\theta, \angle\phi)$
- **Matrix: Rectangular Array of Numbers**

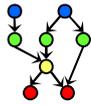

$$\mathbf{A} = \begin{bmatrix} 0 & -1 & -2 & -3 \\ 1 & 1 & -1 & -2 \\ 2 & 1 & 0 & -1 \end{bmatrix}$$

Wikipedia: Matrix (mathematics)  
<http://bit.ly/fwpDwd>

Wikimedia Commons, 2011 – Creative Commons License

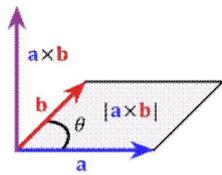

## Vector Operations: Dot & Cross Product, Arithmetic

- **Dot Product aka Inner Product aka Scalar Product**

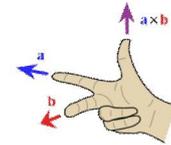

$$\mathbf{a} \cdot \mathbf{b} = \sum_{i=1}^n a_i b_i = a_1 b_1 + a_2 b_2 + \dots + a_n b_n$$

$$\mathbf{a} \times \mathbf{b} = \begin{vmatrix} \mathbf{i} & \mathbf{j} & \mathbf{k} \\ a_1 & a_2 & a_3 \\ b_1 & b_2 & b_3 \end{vmatrix}$$

$$\mathbf{a} \times \mathbf{b} = \begin{vmatrix} a_2 & a_3 \\ b_2 & b_3 \end{vmatrix} \mathbf{i} - \begin{vmatrix} a_1 & a_3 \\ b_1 & b_3 \end{vmatrix} \mathbf{j} + \begin{vmatrix} a_1 & a_2 \\ b_1 & b_2 \end{vmatrix} \mathbf{k}$$

$$\mathbf{a} \times \mathbf{b} = i a_2 b_3 + j a_3 b_1 + k a_1 b_2 - i a_3 b_2 - j a_1 b_3 - k a_2 b_1$$

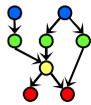

- **Vector Addition**

$$c\mathbf{v}$$

$$\mathbf{u} + \mathbf{v}$$

Wikimedia Commons, 2011 – Creative Commons License

## Matrix Operations [2]: Addition & Multiplication

- **Scalar Multiplication, Transpose**

$$2 \cdot \begin{bmatrix} 1 & 8 & -3 \\ 4 & -2 & 5 \end{bmatrix} = \begin{bmatrix} 2 \cdot 1 & 2 \cdot 8 & 2 \cdot -3 \\ 2 \cdot 4 & 2 \cdot -2 & 2 \cdot 5 \end{bmatrix} = \begin{bmatrix} 2 & 16 & -6 \\ 8 & -4 & 10 \end{bmatrix} \quad \begin{bmatrix} 1 & 2 & 3 \\ 0 & -6 & 7 \end{bmatrix}^T = \begin{bmatrix} 1 & 0 \\ 2 & -6 \\ 3 & 7 \end{bmatrix}$$

$$\mathbf{M} \quad \begin{bmatrix} 1 & 3 & 1 \\ 1 & 0 & 0 \end{bmatrix} + \begin{bmatrix} 0 & 0 & 5 \\ 7 & 5 & 0 \end{bmatrix} - \begin{bmatrix} 1 & 0 & 3 & | & 0 & 1 & 5 \\ 1 & -7 & 0 & + & 5 & 0 & -0 \end{bmatrix} - \begin{bmatrix} 1 & 3 & 6 \\ 8 & 5 & 0 \end{bmatrix}$$

- **Matrix Multiplication**

$$A = \begin{bmatrix} a_{1,1} & a_{1,2} & \dots & a_{1,n} \\ a_{2,1} & a_{2,2} & \dots & a_{2,p} \\ \vdots & \vdots & \ddots & \vdots \\ a_{m,1} & a_{m,2} & \dots & a_{m,n} \end{bmatrix} \rightarrow \begin{bmatrix} A_1 \\ A_2 \\ \vdots \\ A_m \end{bmatrix}$$

$$B = \begin{bmatrix} b_{1,1} & b_{1,2} & \dots & b_{1,p} \\ b_{2,1} & b_{2,2} & \dots & b_{2,p} \\ \vdots & \vdots & \ddots & \vdots \\ b_{n,1} & b_{n,2} & \dots & b_{n,p} \end{bmatrix} \rightarrow [B_1 \ B_2 \ \dots \ B_T]$$

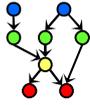

$$A_i = [a_{i,1} \ a_{i,2} \ \dots \ a_{i,n}]$$

$$B_i = [b_{1,i} \ b_{2,i} \ \dots \ b_{n,i}]^T$$

$$AB = \begin{bmatrix} A_1 \\ A_2 \\ \vdots \\ A_m \end{bmatrix} [B_1 \ B_2 \ \dots \ B_p] = \begin{bmatrix} (A_1 \cdot B_1) & (A_1 \cdot B_2) & \dots & (A_1 \cdot B_p) \\ (A_2 \cdot B_1) & (A_2 \cdot B_2) & \dots & (A_2 \cdot B_p) \\ \vdots & \vdots & \ddots & \vdots \\ (A_m \cdot B_1) & (A_m \cdot B_2) & \dots & (A_m \cdot B_p) \end{bmatrix}$$

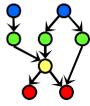

Wikimedia Commons, 2011 – Creative Commons License

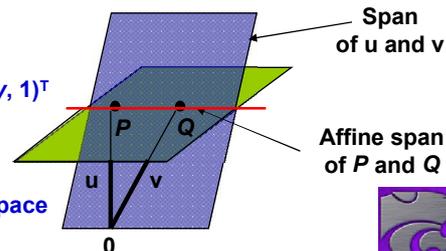

## Linear and Planar Equations in Affine Spaces

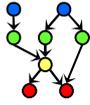

- **Equation of Line in Affine Space**
  - \* Let  $P, Q$  be points in affine space
  - \* **Parametric form** (real-valued parameter  $t$ )
    - ⇒ Set of points of form  $(1 - t)P + tQ$
    - ⇒ Forms line passing through  $P$  and  $Q$
  - \* **Example**
    - ⇒ Cartesian plane of points  $(x, y)$  is an affine space
    - ⇒ Parametric line between  $(a, b)$  and  $(c, d)$ :
 
$$L = \{(1 - t)a + tc, (1 - t)b + td \mid t \in \mathbb{R}\}$$
- **Equation of Plane in Affine Space**
  - \* Let  $P, Q, R$  be points in affine space
  - \* **Parametric form** (real-valued parameters  $s, t$ )
    - ⇒ Set of points of form  $(1 - s)((1 - t)P + tQ) + sR$
    - ⇒ Forms plane containing  $P, Q, R$

## Vector Space Spans and Affine Spans

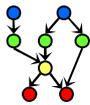

- **Vector Space Span**
  - \* **Definition** – set of all linear combinations of a set of vectors
  - \* **Example: vectors in  $\mathbb{R}^3$** 
    - ⇒ Span of single (nonzero) vector  $v$ : line through the origin containing  $v$
    - ⇒ Span of pair of (nonzero, noncollinear) vectors: plane through the origin containing both
    - ⇒ Span of 3 of vectors in general position: all of  $\mathbb{R}^3$
- **Affine Span**
  - \* **Definition** – set of all affine combinations of a set of points  $P_1, P_2, \dots, P_n$  in an affine space
  - \* **Example: vectors, points in  $\mathbb{R}^3$** 
    - ⇒ Standard affine plan of points  $(x, y, 1)^T$
    - ⇒ Consider points  $P, Q$
    - ⇒ **Affine span**: line containing  $P, Q$
    - ⇒ Also intersection of span, affine space

## Subspaces

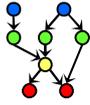

- **Intuitive Idea**
  - \*  $\mathbb{R}^n$ : vector or affine space of “equal or lower dimension”
  - \* Closed under constructive operator for space
- **Linear Subspace**
  - \* **Definition**
    - ⇒ Subset  $S$  of vector space  $(V, +, \cdot)$
    - ⇒ Closed under addition  $(+)$  and scalar multiplication  $(\cdot)$
  - \* **Examples**
    - ⇒ Subspaces of  $\mathbb{R}^3$ : origin  $(0, 0, 0)$ , line through the origin, plane containing origin,  $\mathbb{R}^3$  itself
    - ⇒ For vector  $\mathbf{v}$ ,  $\{\alpha\mathbf{v} \mid \alpha \in \mathbb{R}\}$  is a subspace (why?)
- **Affine Subspace**
  - \* **Definition**
    - ⇒ Nonempty subset  $S$  of vector space  $(V, +, \cdot)$
    - ⇒ Closure  $S'$  of  $S$  under point subtraction is a linear subspace of  $V$
  - \* **Important affine subspace of  $\mathbb{R}^4$** :  $\{(x, y, z, 1)\}$
  - \* Foundation of homogeneous coordinates, 3-D transformations

## Bases

- **Spanning Set (of Set  $S$  of Vectors)**
  - \* **Definition**: set of vectors for which any vector in  $\text{Span}(S)$  can be expressed as linear combination of vectors in spanning set
  - \* **Intuitive idea**: spanning set “covers”  $\text{Span}(S)$
- **Basis (of Set  $S$  of Vectors)**
  - \* **Definition**
    - ⇒ Minimal spanning set of  $S$
    - ⇒ **Minimal**: any smaller set of vectors has smaller span
  - \* **Alternative definition**: linearly independent spanning set
- **Exercise**
  - \* **Claim**: basis of subspace of vector space is always linearly independent
  - \* **Proof**: by contradiction (suppose basis is dependent... not minimal)
- **Standard Basis for  $\mathbb{R}^3$** :  $\mathbf{i}, \mathbf{j}, \mathbf{k}$ 
  - \*  $\mathbf{E} = \{\mathbf{e}_1, \mathbf{e}_2, \mathbf{e}_3\}$ ,  $\mathbf{e}_1 = (1, 0, 0)^T$ ,  $\mathbf{e}_2 = (0, 1, 0)^T$ ,  $\mathbf{e}_3 = (0, 0, 1)^T$
  - \* **How to use this as coordinate system?**

## Coordinates and Coordinate Systems

### ● Coordinates Using Bases

#### \* Coordinates

- ⇒ Consider basis  $B = \{v_1, v_2, \dots, v_n\}$  for vector space
- ⇒ Any vector  $v$  in the vector space can be expressed as linear combination of vectors in  $B$
- ⇒ **Definition:** coefficients of linear combination are coordinates

#### \* Example

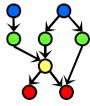

- ⇒  $E = \{e_1, e_2, e_3\}$ ,  $i \equiv e_1 = (1, 0, 0)^T$ ,  $j \equiv e_2 = (0, 1, 0)^T$ ,  $k \equiv e_3 = (0, 0, 1)^T$
- ⇒ Coordinates of  $(a, b, c)$  with respect to  $E$ :  $(a, b, c)^T$

### ● Coordinate System

- \* **Definition:** set of independent points in affine space
- \* Affine span of coordinate system is entire affine space

### ● Exercise

- \* Derive basis for associated vector space of arbitrary coordinate system
- \* (Hint: consider definition of affine span...)

## Using the Dot Product: Length/Norm & Distance

### ● Length

#### \* Definition

$$\Rightarrow \|v\| = \sqrt{v \cdot v}$$

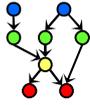

$$\Rightarrow v \cdot v = \sum_i v_i^2$$

#### \* aka Euclidean norm

### ● Applications of the Dot Product

- \* **Normalization of vectors:** division by scalar length  $\|v\|$  converts to unit vector
- \* **Distances**
  - ⇒ **Between points:**  $\|Q - P\|$
  - ⇒ **From points to planes**
- \* **Generating equations (e.g., point loci):** circles, hollow cylinders, etc.
- \* **Ray / object intersection equations**
- \* **See A.3.5, FVD**

## Orthonormal Bases

- **Orthogonality**

- \* **Given:** vectors  $\mathbf{u} = (u_1, u_2, \dots, u_n)^T$ ,  $\mathbf{v} = (v_1, v_2, \dots, v_n)^T$

- \* **Definition**

- ⇒  $\mathbf{u}, \mathbf{v}$  are orthogonal if  $\mathbf{u} \cdot \mathbf{v} = 0$

- ⇒ In  $\mathbb{R}^2$ , angle between orthogonal vectors is  $90^\circ$

- **Orthonormal Bases**

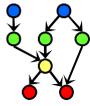

- \* **Necessary and sufficient conditions**

- ⇒  $\mathbf{B} = \{\mathbf{b}_1, \mathbf{b}_2, \dots, \mathbf{b}_n\}$  is basis for given vector space

- ⇒ Every pair  $(\mathbf{b}_i, \mathbf{b}_j)$  is orthogonal

- ⇒ Every vector  $\mathbf{b}_i$  is of unit magnitude ( $\|\mathbf{b}_i\| = 1$ )

- \* **Convenient property:** can just take dot product  $\mathbf{v} \cdot \mathbf{b}_i$  to find coefficients in linear combination (coordinates with respect to  $\mathbf{B}$ ) for vector  $\mathbf{v}$

## Cumulative Transformation Matrices: Basic T, R, S

- **T: Translation** (see [http://en.wikipedia.org/wiki/Translation\\_matrix](http://en.wikipedia.org/wiki/Translation_matrix))

- \* **Given**

- ⇒ Point to be moved – e.g., vertex of polygon or polyhedron

- ⇒ Displacement vector (also represented as point)

- \* **Return:** new, displaced (translated) point of **rigid body**

- **R: Rotation** (see [http://en.wikipedia.org/wiki/Rotation\\_matrix](http://en.wikipedia.org/wiki/Rotation_matrix))

- \* **Given**

- ⇒ Point to be rotated about axis

- ⇒ Axis of rotation

- ⇒ Degrees to be rotated

- \* **Return:** new, displaced (rotated) point of rigid body

- **S: Scaling** (see [http://en.wikipedia.org/wiki/Scaling\\_matrix](http://en.wikipedia.org/wiki/Scaling_matrix))

- \* **Given**

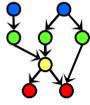

- ⇒ Set of points centered at origin

- ⇒ Scaling factor

- \* **Return:** new, displaced (scaled) point

- **General:** [http://en.wikipedia.org/wiki/Transformation\\_matrix](http://en.wikipedia.org/wiki/Transformation_matrix)

## Translation

- Rigid Body Transformation
- To Move  $p$  Distance and Magnitude of Vector  $v$ :

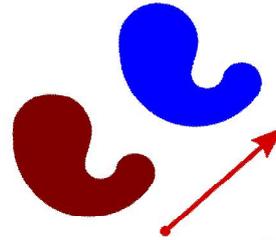

$$T_v \mathbf{p} = \begin{bmatrix} 1 & 0 & 0 & v_x \\ 0 & 1 & 0 & v_y \\ 0 & 0 & 1 & v_z \\ 0 & 0 & 0 & 1 \end{bmatrix} \begin{bmatrix} p_x \\ p_y \\ p_z \\ 1 \end{bmatrix} = \begin{bmatrix} p_x + v_x \\ p_y + v_y \\ p_z + v_z \\ 1 \end{bmatrix} = \mathbf{p} + \mathbf{v}.$$

- Invertibility

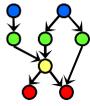

$$T_v^{-1} = T_{-\mathbf{v}}.$$

- Compositionality

$$T_u T_v = T_{\mathbf{u} + \mathbf{v}}.$$

Wikimedia Commons, 2008 – Creative Commons License

## Rotation

- Rigid Body Transformation
- Properties: Inverse = Transpose

$$Q^T Q = I = Q Q^T$$

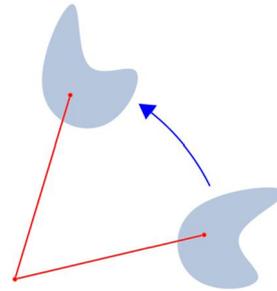

$$\det Q = +1$$

- Idea: Define New (Relative) Coordinate System
- Example

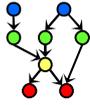

$$Q = \begin{bmatrix} 0.6 & -0.8 & 0 \\ 0.8 & 0.6 & 0 \\ 0 & 0 & 1 \end{bmatrix}$$

- Rotations about x, y, and z Axes (using Plain 3-D Coordinates)

$$Q_x(\theta) = \begin{bmatrix} 1 & 0 & 0 \\ 0 & \cos \theta & -\sin \theta \\ 0 & \sin \theta & \cos \theta \end{bmatrix}, \quad Q_y(\theta) = \begin{bmatrix} \cos \theta & 0 & \sin \theta \\ 0 & 1 & 0 \\ -\sin \theta & 0 & \cos \theta \end{bmatrix}, \quad Q_z(\theta) = \begin{bmatrix} \cos \theta & -\sin \theta & 0 \\ \sin \theta & \cos \theta & 0 \\ 0 & 0 & 1 \end{bmatrix},$$

Wikimedia Commons, 2008 – Creative Commons License

## Rotation as Change of Basis

- 3 x 3 rotation matrices
- 3 x 3 matrices that “rotate” world (leaving out w for simplicity)
- 3 unit vectors originally along x, y, z axes: moved to new positions
- Because of rigid-body rotation, new vectors are still:
  - \* unit vectors
  - \* perpendicular to each other
  - \* compliant with “right hand rule”
- Any such matrix transformation = rotation
  - \* about *some* axis
  - \* by *some* amount
- Let’s call these x, y, and z-axis-aligned unit vectors  $e_1, e_2, e_3$
- Writing out (these are also called  $i, j, k$ ):

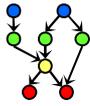

© 1997 - 2011 Murray Bourne

$$e_1 = \begin{bmatrix} 1 \\ 0 \\ 0 \end{bmatrix}$$

$$e_2 = \begin{bmatrix} 0 \\ 1 \\ 0 \end{bmatrix}$$

$$e_3 = \begin{bmatrix} 0 \\ 0 \\ 1 \end{bmatrix}$$

Adapted from slide © 2003 – 2008 A. van Dam, Brown University

## Scaling

- **Not Rigid Body Transformation**
- **Idea: Move Points Toward/Away from Origin**

$$S_v p = \begin{bmatrix} v_x & 0 & 0 & 0 \\ 0 & v_y & 0 & 0 \\ 0 & 0 & v_z & 0 \\ 0 & 0 & 0 & 1 \end{bmatrix} \begin{bmatrix} p_x \\ p_y \\ p_z \\ 1 \end{bmatrix} = \begin{bmatrix} v_x p_x \\ v_y p_y \\ v_z p_z \\ 1 \end{bmatrix}$$

Results of glScalef(2.0, -0.5, 1.0)

© 1993 Neider, Davis, Woo

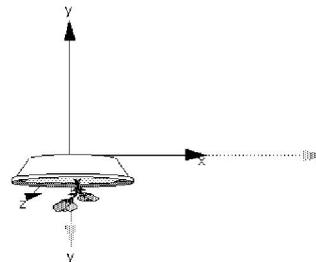

<http://fly.cc.fer.hr/~unreal/theredbook/>

- **Homogeneous Coordinates Make It Easier**

$$S_v p = \begin{bmatrix} 1 & 0 & 0 & 0 \\ 0 & 1 & 0 & 0 \\ 0 & 0 & 1 & 0 \\ 0 & 0 & 0 & \frac{1}{s} \end{bmatrix} \begin{bmatrix} p_x \\ p_y \\ p_z \\ 1 \end{bmatrix} = \begin{bmatrix} p_x \\ p_y \\ p_z \\ \frac{1}{s} \end{bmatrix}$$

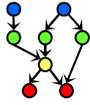

- **Result**

$$\begin{bmatrix} s p_x \\ s p_y \\ s p_z \\ 1 \end{bmatrix}$$

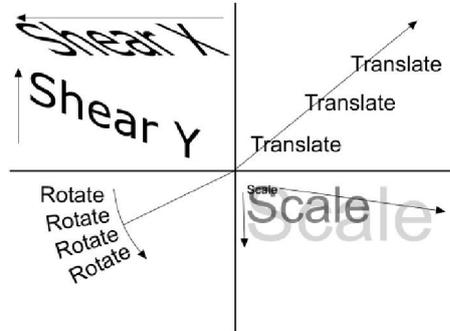

- **Ratio Need Not Be Uniform in x, y, z**

Wikimedia Commons, 2008 – Creative Commons License

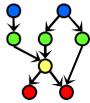

## Other Transformations

- **Shear aka Skew** (<http://bit.ly/hZfx3W>): “Tilting”, Oblique Projection
- **Perspective to Parallel View Volume** (“D” in Foley *et al.*)
- **See also**
  - \* [http://en.wikipedia.org/wiki/Transformation\\_matrix](http://en.wikipedia.org/wiki/Transformation_matrix)
  - \* <http://www.senocular.com/flash/tutorials/transformmatrix/>

© Ramuseco Limited 2004-2005 All Rights Reserved.  
<http://www.bobpowell.net/transformations.htm>

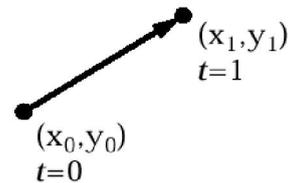

## Parametric Equation of a Line Segment

- **Parametric form for line segment**

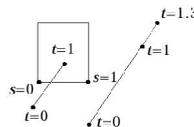

$$* X = x_0 + t(x_1 - x_0) \quad 0 \leq t \leq 1$$

$$* Y = y_0 + t(y_1 - y_0)$$

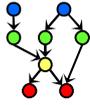

$$* P(t) = P_0 + t(P_1 - P_0)$$

- **Line in general:  $t \in [-\infty, \infty]$**
- **Later: used for clipping (other intersection calculations)**

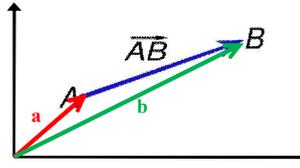

© 2003 – 2008 A. van Dam, Brown University

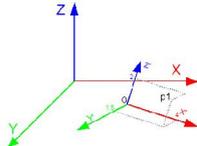

## Importance to CG [1]: Vectors and Matrices

- Points as Vectors (w.r.t. Origin)

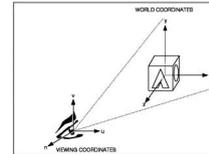

- Local Coordinate Systems (Spaces)

© 2009 Koen Samyn

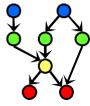

<http://knol.google.com/k/matrices-for-3d-applications-view-transformation>

© 2007 IBM

<http://bit.ly/cS4h7g>

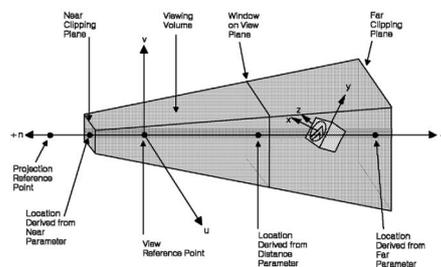

- \* Modelview transformation (MVT): model coordinates to world coordinates
- \* Viewing transformation: world coordinates to camera coordinates
- \* Several more to be covered in this course

## Importance to CG [2]: Homogeneous Coordinates

- Problem: Need to Support Non-Linear Transformations

- \* Affine but not linear: e.g., translation
- \* Non-affine projections: e.g., perspective

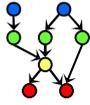

The GraPHIGS Programming Interface:  
Understanding Concepts

© 2007 IBM

<http://bit.ly/cS4h7g>

- Solution: Use 4<sup>th</sup> Coordinate  $w$

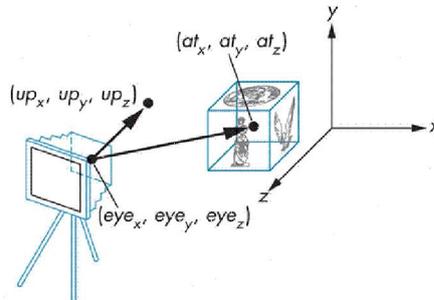

- \* Coordinates look like:  $(x, y, z, w)^T$  with  $w$  kept normalized to 1
- \* Homogeneous coordinates (Wikipedia: <http://bit.ly/fG7RSk>)
- \* Specific case: barycentric (defined w.r.t. simplex, e.g., polygon)  
[http://en.wikipedia.org/wiki/Barycentric\\_coordinates\\_\(mathematics\)](http://en.wikipedia.org/wiki/Barycentric_coordinates_(mathematics))

## Importance to CG [3]: T, R, S in Viewing Transformation

- **Want to**

- \* Specify arbitrary (user-defined) camera view (**camera space aka CS**)
- \* Take picture of standard **world space (WS)**, from **eye point** towards **at point**

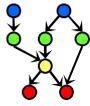

```
GLvoid gluLookAt( GLdouble eyeX, GLdouble eyeY, GLdouble eyeZ,
                  GLdouble centerX, GLdouble centerY, GLdouble centerZ,
                  GLdouble upX, GLdouble upY, GLdouble upZ)
```

© 2009 Roberto Toldo

<http://bit.ly/hvAZAe>

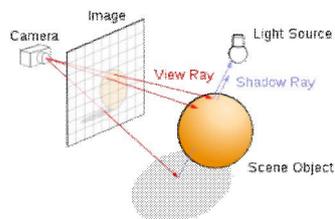

- **Need to: Map CS to WS (Normalizing Transformation)**

## Importance to CG [4]: Intersections, Clipping

- **Problem: Need to Find Intersection between Objects**

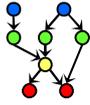

- \* **Clipping:** line segments – edge of polygon (model) with clip edge
- \* **Ray tracing:** ray – from eye, through “screen” pixel, into scene

© 2011 Wikipedia

[http://en.wikipedia.org/wiki/Ray\\_tracing\\_\(graphics\)](http://en.wikipedia.org/wiki/Ray_tracing_(graphics))

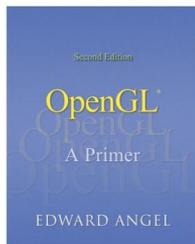

- \* **Many other intersections in computer graphics!**
- **Solution: Represent Objects using Parametric Equations**
  - \* Moving object or object being traced (e.g., ray):  $P(t)$
  - \* Find point where  $P(t) = Q$  (boundary of second object)
  - \* May have multiple solutions (as polynomials may have > 1 zero)
  - \* Usually want closest one

## Textbook and Recommended Books

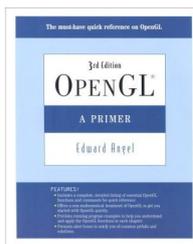

1<sup>st</sup> edition (outdated)

2<sup>nd</sup> edition (OK to use)

2<sup>nd</sup> edition

3<sup>rd</sup> edition

### Required Textbook

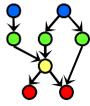

Eberly, D. H. (2006). *3D Game Engine Design: A Practical Approach to Real-Time Computer Graphics*, second edition. San Francisco, CA: Morgan Kaufman.

### Recommended References

Angel, E. O. (2007). *OpenGL: A Primer*, third edition. Reading, MA: Addison-Wesley. [2<sup>nd</sup> edition on reserve]

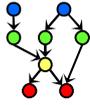

Shreiner, D., Woo, M., Neider, J., & Davis, T. (2009). *OpenGL® Programming Guide: The Official Guide to Learning OpenGL®, Versions 3.0 and 3.1*, seventh edition.

["The Red Book": use 7<sup>th</sup> ed. or later]

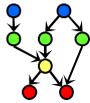

## Lab 0

- **Warm-Up Lab**
  - \* Account set-up
  - \* Linux environment
  - \* Simple OpenGL exercise
- **Basic Account Set-Up**
  - \* See <http://support.cis.ksu.edu> to understand KSU Department of CIS setup
  - \* Make sure your CIS department account is set up
  - \* If not, use SelfServ: <https://selfserv.cis.ksu.edu/selfserv/requestAccount>
- **Linux Environment**
  - \* Make sure your CIS department account is set up
  - \* Learn how to navigate, set your shell (see KSOL, <http://unixhelp.ed.ac.uk>)
  - \* Lab 1 and first homeworks will ask you to render to local XWindows server
- **Simple OpenGL exercise**
  - \* Watch OpenGL Primer Part 1 as needed
  - \* Follow intro tutorials on "NeHe" (<http://nehe.gamedev.net>) as instructed
  - \* Turn in: source code, screenshot as instructed in Lab 0 handout

## Summary

- **Cumulative Transformation Matrices (CTM): T, R, S**
  - \* Translation
  - \* Rotation
  - \* Scaling
  - \* Setup for Shear/Skew, Perspective to Parallel – see Eberly, Foley *et al.*
- “Matrix Stack” in OpenGL: Premultiplication of Matrices
- **Coming Up**
  - \* Parametric equations in clipping
  - \* Intersection testing: ray-cube, ray-sphere, implicit equations (ray tracing)
- **Homogeneous Coordinates: What Is That 4<sup>th</sup> Coordinate?**
  - \* [http://en.wikipedia.org/wiki/Homogeneous\\_coordinates](http://en.wikipedia.org/wiki/Homogeneous_coordinates)
  - \* Crucial for ease of normalizing T, R, S transformations in graphics
  - \* See: Slide 14 of this lecture
  - \* Note: Slides 20 & 23 (T, S) versus 21 (R)
  - \* Read about them in Eberly 2<sup>e</sup>, Angel 3<sup>e</sup>
  - \* Special case: barycentric coordinates

## Terminology

- **Cumulative Transformation Matrices (CTM): Translation, Rotation, Scaling**
- **Some Basic Analytic Geometry and Linear Algebra for CG**
  - \* Vector space (VS) – set of vectors: addition, scalar multiplication; VS axioms
  - \* Affine space (AS) – set of points with associated VS: vector difference, point-vector addition; AS axioms
  - \* Linear subspace – nonempty subset  $S$  of VS  $(V, +, \cdot)$  closed under  $+$  and  $\cdot$
  - \* Affine subspace – nonempty subset  $S$  of VS  $(V, +, \cdot)$  such that closure  $S'$  of  $S$  under point subtraction is a linear subspace of  $V$
  - \* Dot product – scalar-valued inner product  $\langle \mathbf{u}, \mathbf{v} \rangle \equiv \mathbf{u} \cdot \mathbf{v} \equiv u_1v_1 + u_2v_2 + \dots + u_nv_n$
  - \* Orthogonality – property of vectors  $\mathbf{u}, \mathbf{v}$  that  $\mathbf{u} \cdot \mathbf{v} = 0$
  - \* Orthonormality – basis containing pairwise-orthogonal unit vectors
  - \* Length (Euclidean norm) –  $\|\mathbf{v}\| = \sqrt{\mathbf{v} \cdot \mathbf{v}}$
  - \* Rigid body transformation – one that preserves distance between points
  - \* Homogeneous coordinates (esp. barycentric coordinates) – allow affine, projective transformations; “4-D” space for 3-D CG
