

## Lecture 31 of 41

### Ray Tracing, Part 1 of 2: Intersections, Ray Trees & Recursion

William H. Hsu

Department of Computing and Information Sciences, KSU

KSOL course pages: <http://bit.ly/hGvXIH> / <http://bit.ly/eVizrE>  
Public mirror web site: <http://www.kddresearch.org/Courses/CIS636>  
Instructor home page: <http://www.cis.ksu.edu/~bhsu>

#### Readings:

Last class: §5.3, Eberly 2<sup>e</sup> – see <http://bit.ly/ieUq45>; CGA Handout

Today: Chapter 14, Eberly 2<sup>e</sup>

Next class: [Ray Tracing Handout](#)

Reference – Wikipedia, [Ray Tracing](#): <http://bit.ly/dV7INm>

Reference – ACM Ray Tracing News: <http://bit.ly/fqyZnQ>

## Lecture Outline

- Reading for Last Class: §5.3, Eberly 2<sup>e</sup>; CGA Handout
- Reading for Today: Chapter 14, Eberly 2<sup>e</sup>
- Reading for Next Class: [Ray Tracing Handout](#)
- Last Time: Animation Part 3 of 3 – Inverse Kinematics
  - \* FK vs. IK
  - \* IK
    - Autonomous agents vs. hand-animated movement
    - Analytical vs. iterative solutions
  - \* Rag doll physics, rigid-body dynamics, physically-based models
- End of Material on: Particle Systems, Collisions, CGA, PBM
- Today: Ray Tracing, Part 1 of 2
  - \* Vectors: Light/shadow (L), Reflected (R), Transmitted/refracted (T)
  - \* Basic recursive ray tracing: ray trees
- Next Class: Ray Tracing Lab

## Where We Are

21	Lab 4a: Animation Basics	Flash animation handout
22	Animation 2: Rotations, Dynamics, Kinematics	Chapter 17, esp. §17.1 – 17.2
23	Demos 4: Modeling & Simulation, Rotations	Chapter 10, 13, §17.3 – 17.6
24	Collisions 1: axes, OBBs, Lab 4b	§2.4.3, 8.1, GL handout
25	Spatial Sorting, Binary Space Partitioning	Chapter 6, esp. §6.1
26	Demos 5: More CGA, Picking, HW Exam	Chapter 7; § 8.4
27	Lab 5a: Interaction Handling	§ 8.3 – 8.4; 4.2, 5.0, 5.6, 9.1
28	Collisions 2: Dynamic, Particle Systems	§ 9.1, particle system handout
29	Exam 2 review; Hour Exam 2 (evening)	Chapters 5 – 6, 7 – 8, 12, 17
29	Lab 5b: Particle Systems	Particle system handout
30	Animation 3: Control & IK	§ 5.3, CGA handout
32	Lab 6a: Ray Tracing Basics with POV-Ray	RT handout
33	Ray Tracing 2: advanced topic survey	Chapter 15, RT handout
34	Visualization 1: Data (Quantities & Evidence)	Tufte handout (1)
35	Lab 6b: More Ray Tracing	RT handout
36	Visualization 2: Objects	Tufte handout (2 & 4)
37	Color Basics, Term Project Prep	Color handout
38	Lab 7: Fractals & Terrain Generation	Fractals/Terrain handout
39	Visualization 3: Processes; Final Review 1	Tufte handout (3)
40	Project presentations 1; Final Review 2	–
41	Project presentations 2	–
	Final Exam	Ch. 1 – 8, 10 – 15, 17, 20

Lightly-shaded entries denote the due date of a written problem set; heavily-shaded entries, that of a machine problem (programming assignment); blue-shaded entries, that of a paper review; and the green-shaded entry, that of the term project.

Green, blue and red letters denote exam review, exam, and exam solution review dates.

## Review [1]: Kinematics & Degrees of Freedom

- How about this robot arm?

- Six again
- 2-base, 1-shoulder, 1-elbow, 2-wrist

Adapted from slides © 2000 – 2005 D. Brogan, University of Virginia  
CS 551, Advanced CG & Animation – <http://bit.ly/huXrxd>

## Review [2]: Joint Types

Revolute Joint  
1 DOF (Variable -  $\theta$ )

Prismatic Joint  
1 DOF (linear) (Variables -  $d$ )

Spherical Joint  
3 DOF (Variables -  $Y_1, Y_2, Y_3$ )

Adapted from slides © 2002 R. Melamud, Stanford University  
Mirrored at CMU 16-311 Introduction to Robotics, <http://generalrobotics.org>

7 

## Forward Kinematics: Joint Angles to Bone Coordinates

- We will use the vector:  

$$\Phi = [\phi_1 \ \phi_2 \ \dots \ \phi_M]$$
 to represent the array of M joint DOF values
- We will also use the vector:  

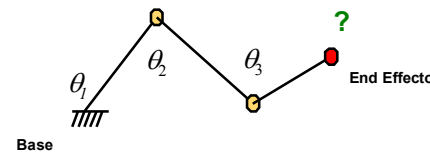

$$\mathbf{e} = [e_1 \ e_2 \ \dots \ e_N]$$
 to represent an array of N DOFs that describe the end effector in world space. For example, if our end effector is a full joint with orientation,  $\mathbf{e}$  would contain 6 DOFs: 3 translations and 3 rotations. If we were only concerned with the end effector position,  $\mathbf{e}$  would just contain the 3 translations.

CIS 536/636 Introduction to Computer Graphics Lecture 31 of 41 Computing & Information Sciences Kansas State University

10 

## Inverse Kinematics: Issues

- IK is challenging because while  $f()$  may be relatively easy to evaluate,  $f^{-1}()$  usually isn't
- For one thing, there may be several possible solutions for  $\Phi$ , or there may be no solutions
- Even if there is a solution, it may require complex and expensive computations to find it
- As a result, there are many different approaches to solving IK problems

## Review [6]: Ragdoll Physics

- Type of Procedural Animation**
  - Automatically generates CGA directives (rotations)
  - Based on simulation
  - Rigid-body dynamics
- Articulated Figure**
  - Gravity
  - No autonomous movement
  - Used for inert body
    - Usually: character death (car impact, falling body, etc.)
    - Less often: unconscious, paralyzed character
- Collisions with Multiple Bodies**
  - Inter-character
  - Character-object

Falling Bodies © 1997 – 2001 Animats

## Review [8]: Physically-Based Modeling (PBM)

- Particle Dynamics
  - \* Emitters
    - 0-D (points), 1-D (lines), 2-D (planes, discs, cross-sections)
    - e.g., fireworks (0-D); fountains (0/1/2-D); smokestacks, jets (2-D)
  - \* Simulation: birth-death process, functions of particle age/trajectory
- Rigid-Body Dynamics
  - \* Constrained systems of connected parts
  - \* Examples: falling rocks, colliding vehicles, rag dolls
- Articulated Figures: Primarily IK
- More References

16

## Ray Tracing [2]: Why Use It?

- Simulate rays of light
- Produces natural lighting effects
  - Reflection
  - Refraction
  - Soft Shadows
  - Depth of Field
  - Motion Blur
  - Caustics
- Hard to simulate effects with rasterization techniques (OpenGL)
- Rasterizers require many passes
- Ray-tracing easier to implement

Adapted from slides ♥ 2001 D. Shreiner & B. Grantham, SCU

17

## Ray Tracing [3]: Who Uses It?

- Entertainment (Movies, Commercials)
- Games pre-production
- Simulation

Adapted from slides ♥ 2001 D. Shreiner & B. Grantham, SCU

18

## Ray Tracing [4]: Brief History

- Decartes, 1637 A.D. - analysis of rainbow
- Arthur Appel, 1968 - used for lighting 3D models
- Turner Whitted, 1980 - "An Improved Illumination Model for Shaded Display" really kicked everyone off.
- 1980-now - Lots of research

Adapted from slides ♥ 2001 D. Shreiner & B. Grantham, SCU  
COEN 290: Computer Graphics I, Winter 2001 – <http://bit.ly/hz1kfu>

SANTA CLARA UNIVERSITY  
RESEARCH IN EDUCATION

CIS 536/636 Introduction to Computer Graphics Lecture 31 of 41 Computing & Information Sciences Kansas State University

19  **Ray Tracing [5]: Basic Operations**

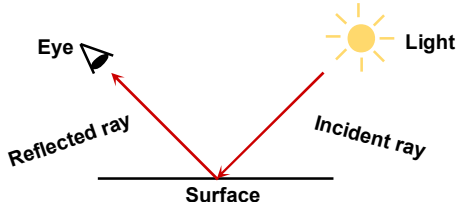

- Generating Rays
- Intersecting Rays with Scene
- Lighting
- Shadowing
- Reflections

Adapted from slides © 2001 D. Shreiner & B. Grantham, SCU  
COEN 290: Computer Graphics I, Winter 2001 – <http://bit.ly/hz1kfu>

CIS 536/636 Introduction to Computer Graphics Lecture 31 of 43 Computing & Information Sciences Kansas State University

20  **Ray Tracing [6]: Basic Idea**

- Simulate light rays from light source to eye

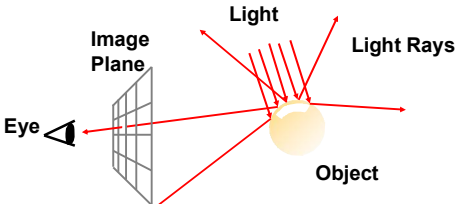

Adapted from slides © 2001 D. Shreiner & B. Grantham, SCU  
COEN 290: Computer Graphics I, Winter 2001 – <http://bit.ly/hz1kfu>

CIS 536/636 Introduction to Computer Graphics Lecture 31 of 43 Computing & Information Sciences Kansas State University

21  **“Forward” Ray Tracing**

- Trace rays from light
- Lots of work for little return

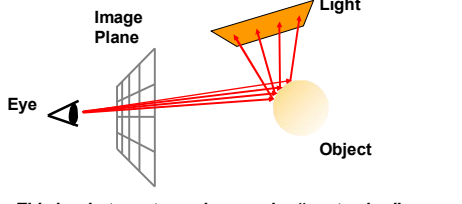

Adapted from slides © 2001 D. Shreiner & B. Grantham, SCU  
COEN 290: Computer Graphics I, Winter 2001 – <http://bit.ly/hz1kfu>

CIS 536/636 Introduction to Computer Graphics Lecture 31 of 43 Computing & Information Sciences Kansas State University

22  **“Backward” Ray Tracing**

- Trace rays from eye instead
- Do work where it matters

*This is what most people mean by “ray tracing”.*

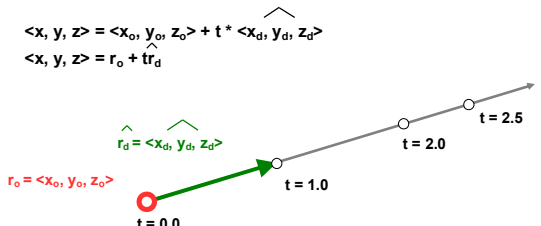

Adapted from slides © 2001 D. Shreiner & B. Grantham, SCU  
COEN 290: Computer Graphics I, Winter 2001 – <http://bit.ly/hz1kfu>

CIS 536/636 Introduction to Computer Graphics Lecture 31 of 43 Computing & Information Sciences Kansas State University

23  **Ray: Parametric Form**

- Ray expressed as function of a single parameter (“t”)

$$\langle x, y, z \rangle = \langle x_o, y_o, z_o \rangle + t * \langle x_d, y_d, z_d \rangle$$

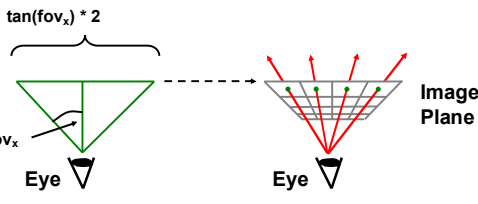

$$\langle x, y, z \rangle = r_o + t \hat{r}_d$$

Adapted from slides © 2001 D. Shreiner & B. Grantham, SCU  
COEN 290: Computer Graphics I, Winter 2001 – <http://bit.ly/hz1kfu>

CIS 536/636 Introduction to Computer Graphics Lecture 31 of 43 Computing & Information Sciences Kansas State University

24  **Generating Rays [1]**

- Trace one ray for each pixel (u, v) in image plane

(Looking down from the top)

Adapted from slides © 2001 D. Shreiner & B. Grantham, SCU  
COEN 290: Computer Graphics I, Winter 2001 – <http://bit.ly/hz1kfu>

CIS 536/636 Introduction to Computer Graphics Lecture 31 of 43 Computing & Information Sciences Kansas State University

25

## Generating Rays [2]

- Trace one ray for each pixel  $(u, v)$  in image plane

(Looking from the side)

$(\tan(\text{fov}_x) * 2) / m$   
 $(\tan(\text{fov}_y) * 2) / n$

Adapted from slides ♥ 2001 D. Shreiner & B. Grantham, SCU  
 COEN 290: Computer Graphics I, Winter 2001 – <http://bit.ly/hz1kfu>

CIS 536/636 Introduction to Computer Graphics Lecture 31 of 41 Computing & Information Sciences Kansas State University

26

## Generating Rays [3]

- Trace one ray for each pixel  $(u, v)$  in image plane

```
renderImage() {
  for each pixel i, j in the image
    ray.setStart(0, 0, 0); // r_o
    ray.setDir ((.5 + i) * tan(fov_x) * 2 / m,
               (.5 + j) * tan(fov_y) * 2 / n,
               1.0); // r_d
    ray.normalize();
    image[i][j] = rayTrace(ray);
}
```

Adapted from slides ♥ 2001 D. Shreiner & B. Grantham, SCU  
 COEN 290: Computer Graphics I, Winter 2001 – <http://bit.ly/hz1kfu>

CIS 536/636 Introduction to Computer Graphics Lecture 31 of 41 Computing & Information Sciences Kansas State University

27

## Ray/Triangle Intersection [1]: Intersection Test Revisited

- Want to know: at what point  $p$  does ray intersect triangle?
- Compute lighting, reflected rays, shadowing from that point

$p = t_{\min}$   
 $\langle ?, ?, ? \rangle$   
 $(t = ???)$

Adapted from slides ♥ 2001 D. Shreiner & B. Grantham, SCU  
 COEN 290: Computer Graphics I, Winter 2001 – <http://bit.ly/hz1kfu>

CIS 536/636 Introduction to Computer Graphics Lecture 31 of 41 Computing & Information Sciences Kansas State University

28

## Ray/Triangle Intersection [2]: Ray/Plane Intersection Point $p$

- Step 1 : Intersect with plane  
 $(Ax + By + Cz + D = 0)$

Plane normal  $n = \langle A, B, C \rangle$   
 $t_{\min} = p = -(n \cdot r_o + D) / (n \cdot r_d)$

Adapted from slides ♥ 2001 D. Shreiner & B. Grantham, SCU  
 COEN 290: Computer Graphics I, Winter 2001 – <http://bit.ly/hz1kfu>

CIS 536/636 Introduction to Computer Graphics Lecture 31 of 41 Computing & Information Sciences Kansas State University

29

## Ray/Triangle Intersection [3]: Triangle Containment

- Step 2 : Check against triangle edges

$E_i = V_i V_{i+1} \times n$  (plane A, B, C)  
 $d_i = -A \cdot N$  (plane D)

Plug  $p$  into  $(p \cdot E_i + d_i)$  for each edge  
 if signs are all positive or negative,  
 point is inside triangle!

Adapted from slides ♥ 2001 D. Shreiner & B. Grantham, SCU  
 COEN 290: Computer Graphics I, Winter 2001 – <http://bit.ly/hz1kfu>

CIS 536/636 Introduction to Computer Graphics Lecture 31 of 41 Computing & Information Sciences Kansas State University

30

## Triangle Normals for Shading

- Could use plane normals (flat shading)
- Better to interpolate from vertices

Find areas

Adapted from slides ♥ 2001 D. Shreiner & B. Grantham, SCU  
 COEN 290: Computer Graphics I, Winter 2001 – <http://bit.ly/hz1kfu>

CIS 536/636 Introduction to Computer Graphics Lecture 31 of 41 Computing & Information Sciences Kansas State University

31

## Finding Intersections

- Check all triangles, keep closest intersection  $t_{\min}$

```

hitObject(ray) {
  for each triangle in scene
    does ray intersect triangle?
    if(intersected and was closer)
      save that intersection
    if(intersected)
      return intersection point and normal
}
  
```

Adapted from slides ♥ 2001 D. Shreiner & B. Grantham, SCU  
COEN 290: Computer Graphics I, Winter 2001 – <http://bit.ly/hz1kfu>

CIS 536/636 Introduction to Computer Graphics Lecture 31 of 41 Computing & Information Sciences Kansas State University

32

## Lighting [1]: General Notation Review

- We'll use triangles for lights
- Can build complex shapes from triangles
- Some lighting terms

Adapted from slides ♥ 2001 D. Shreiner & B. Grantham, SCU  
COEN 290: Computer Graphics I, Winter 2001 – <http://bit.ly/hz1kfu>

CIS 536/636 Introduction to Computer Graphics Lecture 31 of 41 Computing & Information Sciences Kansas State University

33

## Lighting [2]: Modified Phong Illumination

- Use modified Phong lighting
  - similar to OpenGL
  - simulates rough and shiny surfaces

```

for each light
  In = IambientKambient +
      IdiffuseKdiffuse (L·N) +
      IspecularKspecular (R·V)n
  
```

Adapted from slides ♥ 2001 D. Shreiner & B. Grantham, SCU  
COEN 290: Computer Graphics I, Winter 2001 – <http://bit.ly/hz1kfu>

CIS 536/636 Introduction to Computer Graphics Lecture 31 of 41 Computing & Information Sciences Kansas State University

34

## Ambient Light

- $I_{\text{ambient}}$  – simulates indirect lighting in a scene

- May not need for RT!

Adapted from slides ♥ 2001 D. Shreiner & B. Grantham, SCU  
COEN 290: Computer Graphics I, Winter 2001 – <http://bit.ly/hz1kfu>

CIS 536/636 Introduction to Computer Graphics Lecture 31 of 41 Computing & Information Sciences Kansas State University

35

## Diffuse Light

- $I_{\text{diffuse}}$  – simulates direct lighting on rough surface
- Viewer-independent
- Paper, rough wood, brick, etc...

Adapted from slides ♥ 2001 D. Shreiner & B. Grantham, SCU  
COEN 290: Computer Graphics I, Winter 2001 – <http://bit.ly/hz1kfu>

CIS 536/636 Introduction to Computer Graphics Lecture 31 of 41 Computing & Information Sciences Kansas State University

36

## Specular Light

- $I_{\text{specular}}$  simulates direct lighting on a smooth surface
- Viewer dependent
- Plastic, metal, polished wood, etc...

Adapted from slides ♥ 2001 D. Shreiner & B. Grantham, SCU  
COEN 290: Computer Graphics I, Winter 2001 – <http://bit.ly/hz1kfu>

CIS 536/636 Introduction to Computer Graphics Lecture 31 of 41 Computing & Information Sciences Kansas State University

37

## Shadow Test

- Check against other objects to see if point is shadowed

Adapted from slides ♥ 2001 D. Shreiner & B. Grantham, SCU  
COEN 290: Computer Graphics I, Winter 2001 – <http://bit.ly/hz1kfu>

CIS 536/636 Introduction to Computer Graphics Lecture 31 of 41 Computing & Information Sciences Kansas State University

38

## Reflection

- Angle of incidence = angle of reflection ( $\theta_I = \theta_R$ )
- I, R, N lie in the same plane

$$R = I - 2(N \cdot I)N$$

Adapted from slides ♥ 2001 D. Shreiner & B. Grantham, SCU  
COEN 290: Computer Graphics I, Winter 2001 – <http://bit.ly/hz1kfu>

CIS 536/636 Introduction to Computer Graphics Lecture 31 of 41 Computing & Information Sciences Kansas State University

39

## Putting It All Together [1]: Recursive Calculation & Ray Tree

- Recursive ray evaluation

```
rayTrace(ray) {
    hitObject(ray, p, n, triangle);
    color = object color;
    if(object is light)
        return(color);
    else
        return(lightning(p, n, color));
}
```

Ray tree  
© 2000 N. Patra/Kalakis, MIT  
<http://bit.ly/hz1kfu>

I = Incident ray  
S = light Source vector (aka L)  
R = reflected ray  
T = transmitted ray

- Generates ray tree shown at right

Adapted from slides ♥ 2001 D. Shreiner & B. Grantham, SCU  
COEN 290: Computer Graphics I, Winter 2001 – <http://bit.ly/hz1kfu>

CIS 536/636 Introduction to Computer Graphics Lecture 31 of 41 Computing & Information Sciences Kansas State University

40

## Putting It All Together [2]: Applying Lighting

- Calculating surface color

```
lighting(point) {
    color = ambient color;
    for each light
        if(hitObject(shadow ray))
            color += lightcolor *
                dot(shadow ray, n);
    color += rayTrace(reflection) *
        pow(dot(reflection, ray), shininess);
    return(color);
}
```

Adapted from slides ♥ 2001 D. Shreiner & B. Grantham, SCU  
COEN 290: Computer Graphics I, Winter 2001 – <http://bit.ly/hz1kfu>

CIS 536/636 Introduction to Computer Graphics Lecture 31 of 41 Computing & Information Sciences Kansas State University

41

## Putting It All Together [3]: Main Program

```
main() {
    triangles = readTriangles();
    image = renderImage(triangles);
    writeImage(image);
}
```

Adapted from slides ♥ 2001 D. Shreiner & B. Grantham, SCU  
COEN 290: Computer Graphics I, Winter 2001 – <http://bit.ly/hz1kfu>

CIS 536/636 Introduction to Computer Graphics Lecture 31 of 41 Computing & Information Sciences Kansas State University

42

## Good Start: What next?

- Lighting, Shadows, Reflection are enough to make some compelling images
- Want better lighting and objects
- Need more speed

Adapted from slides ♥ 2001 D. Shreiner & B. Grantham, SCU  
COEN 290: Computer Graphics I, Winter 2001 – <http://bit.ly/hz1kfu>

CIS 536/636 Introduction to Computer Graphics Lecture 31 of 41 Computing & Information Sciences Kansas State University

43

## More Quality, More Speed

- Better Lighting + Forward Tracing
- Texture Mapping
- Modeling Techniques
- Distributed Ray Tracing: Techniques
  - \* Motion Blur
  - \* Depth of Field
  - \* Blurry Reflection/Refraction
  - \* Wikipedia, *Distributed Ray Tracing*: <http://bit.ly/iHyVUs>
- Improving Image Quality
- Acceleration Techniques

Adapted from slides ♥ 2001 D. Shreiner & B. Grantham, SCU  
COEN 290: Computer Graphics I, Winter 2001 – <http://bit.ly/hz1kfu>

CIS 536/636 Introduction to Computer Graphics Lecture 31 of 41 Computing & Information Sciences Kansas State University

44

## Refraction [1]: Snell's Law

- Keep track of medium (air, glass, etc)
- Need *index of refraction* ( $\eta$ )
- Need solid objects

$$\frac{\sin(\theta_I)}{\sin(\theta_T)} = \frac{\eta_1}{\eta_2}$$

46

## Improved Light Model: Cook-Torrance

- Cook-Torrance model
  - \* Based on a microfacet model
  - \* Wikipedia: <http://bit.ly/hX3U30>
- Metals have different color at angle
- Oblique reflections leak around corners

Adapted from slides ♥ 2001 D. Shreiner & B. Grantham, SCU  
COEN 290: Computer Graphics I, Winter 2001 – <http://bit.ly/hz1kfu>

47

## Using "Forward" Ray Tracing [1]: Lensed Caustics for Indirect Lighting

- Backward tracing doesn't handle indirect lighting too well
- To get *caustics*, trace forward, store results in texture map

Adapted from slides ♥ 2001 D. Shreiner & B. Grantham, SCU  
COEN 290: Computer Graphics I, Winter 2001 – <http://bit.ly/hz1kfu>

CIS 536/636 Introduction to Computer Graphics Lecture 31 of 41 Computing & Information Sciences Kansas State University

48

## Using "Forward" Ray Tracing [2]: Example

CIS 536/636 Introduction to Computer Graphics Lecture 31 of 41 Computing & Information Sciences Kansas State University

49  **Texture Mapping & Ray Tracing [1]:  
Applying Surface Detail**

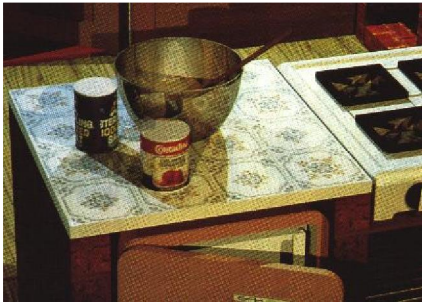

- Using texture maps
  - \* Add surface detail
  - \* Think of it like texturing in OpenGL
- Diffuse, specular colors
- Shininess value
- Bump map
- Transparency value

Adapted from slides ♥ 2001 D. Shreiner & B. Grantham, SCU  
COEN 290: Computer Graphics I, Winter 2001 – <http://bit.ly/hz1kfu>

 

CIS 536/636 Introduction to Computer Graphics Lecture 31 of 41 Computing & Information Sciences Kansas State University

50  **Texture Mapping & Ray Tracing [2]:  
Example**

Adapted from slides ♥ 2001 D. Shreiner & B. Grantham, SCU  
COEN 290: Computer Graphics I, Winter 2001 – <http://bit.ly/hz1kfu>

 

CIS 536/636 Introduction to Computer Graphics Lecture 31 of 41 Computing & Information Sciences Kansas State University

51  **Parametric Surfaces**

- More expressive than triangle
- Intersection is probably slower
- $u$  and  $v$  on surface can be used as texture  $s, t$

Adapted from slides ♥ 2001 D. Shreiner & B. Grantham, SCU  
COEN 290: Computer Graphics I, Winter 2001 – <http://bit.ly/hz1kfu>

CIS 536/636 Introduction to Computer Graphics Lecture 31 of 41 Computing & Information Sciences Kansas State University

52  **Constructive Solid Geometry**

- Union, Subtraction, Intersection of solid objects
- Have to keep track of intersections

Adapted from slides ♥ 2001 D. Shreiner & B. Grantham, SCU  
COEN 290: Computer Graphics I, Winter 2001 – <http://bit.ly/hz1kfu>

 

CIS 536/636 Introduction to Computer Graphics Lecture 31 of 41 Computing & Information Sciences Kansas State University

53  **Hierarchical Transformation**

- Scene made of parts
- Each part made of smaller parts
- Each smaller part has transformation linking it to larger part
- Transformation can change over time: animation (CGA)

Adapted from slides ♥ 2001 D. Shreiner & B. Grantham, SCU  
COEN 290: Computer Graphics I, Winter 2001 – <http://bit.ly/hz1kfu>

 

CIS 536/636 Introduction to Computer Graphics Lecture 31 of 41 Computing & Information Sciences Kansas State University

54  **Distributed Ray Tracing [1]:  
Basic Idea**

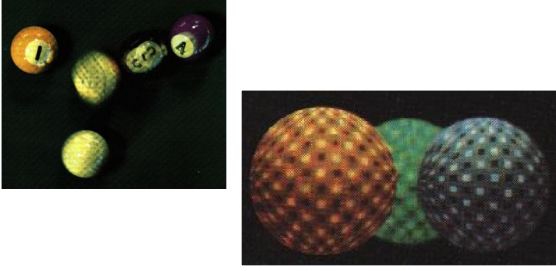

- Average multiple rays instead of just one ray
- Use for both shadows, reflections, transmission (refraction)
- Use for motion blur
- Use for depth of field

Adapted from slides ♥ 2001 D. Shreiner & B. Grantham, SCU  
COEN 290: Computer Graphics I, Winter 2001 – <http://bit.ly/hz1kfu>

CIS 536/636 Introduction to Computer Graphics Lecture 31 of 41 Computing & Information Sciences Kansas State University

55  **Distributed Ray Tracing [2]: Example**

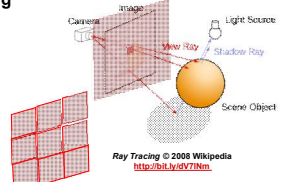

Adapted from slides ♥ 2001 D. Shreiner & B. Grantham, SCU  
COEN 290: Computer Graphics I, Winter 2001 – <http://bit.ly/hz1kfu>

CIS 536/636 Introduction to Computer Graphics Lecture 31 of 41 Computing & Information Sciences Kansas State University

56  **Distributed Ray Tracing [3]: Supersampling**

- One ray is not enough (jaggies)
- Can use multiple rays per pixel - **supersampling**
- Can use a few samples, continue if they're very different - **adaptive supersampling**
- Texture interpolation & filtering

Adapted from slides ♥ 2001 D. Shreiner & B. Grantham, SCU  
COEN 290: Computer Graphics I, Winter 2001 – <http://bit.ly/hz1kfu>

CIS 536/636 Introduction to Computer Graphics Lecture 31 of 41 Computing & Information Sciences Kansas State University

57  **Acceleration!**

- 1280x1024 image with 10 rays/pixel
- 1000 objects (triangle, CSG, NURBS)
- 3 levels recursion

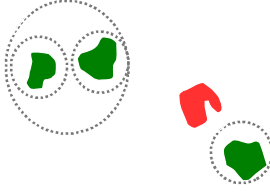

39321600000 intersection tests  
100000 tests/second -> **109 days!**  
**Must use an acceleration method!**

Adapted from slides ♥ 2001 D. Shreiner & B. Grantham, SCU  
COEN 290: Computer Graphics I, Winter 2001 – <http://bit.ly/hz1kfu>

CIS 536/636 Introduction to Computer Graphics Lecture 31 of 41 Computing & Information Sciences Kansas State University

58  **Bounding Volumes**

- Use simple shape for quick test, keep BV hierarchy

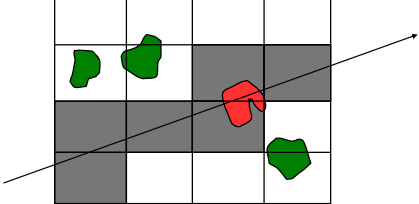

Adapted from slides ♥ 2001 D. Shreiner & B. Grantham, SCU  
COEN 290: Computer Graphics I, Winter 2001 – <http://bit.ly/hz1kfu>

CIS 536/636 Introduction to Computer Graphics Lecture 31 of 41 Computing & Information Sciences Kansas State University

59  **Spatial Partitioning: Subdivision**

- Break your space into pieces
- Search the structure linearly

Adapted from slides ♥ 2001 D. Shreiner & B. Grantham, SCU  
COEN 290: Computer Graphics I, Winter 2001 – <http://bit.ly/hz1kfu>

CIS 536/636 Introduction to Computer Graphics Lecture 31 of 41 Computing & Information Sciences Kansas State University

60  **Parallelism**

- Can always throw more processors at it
- Parallel computing model
  - \* Multiple processes or threads
  - \* Data parallel: separate pixel for each

Adapted from slides ♥ 2001 D. Shreiner & B. Grantham, SCU  
COEN 290: Computer Graphics I, Winter 2001 – <http://bit.ly/hz1kfu>

## Summary

- Reading for Last Class: §5.3, Eberly 2<sup>e</sup>; CGA Handout
- Reading for Today: Chapter 14, Eberly 2<sup>e</sup>
- Reading for Next Class: Ray Tracing Handout
- Last Class: Particle Systems, Collisions, IK/CGA Concluded
  - \* Dynamics vs. kinematics, forward vs. inverse revisited
  - \* IK: autonomous vs. hand-animated; solution approaches
  - \* Rag doll physics, rigid-body dynamics, physically-based models
- Today: Ray Tracing, Part 1 of 2
  - \* Vectors
    - Light (L): to point light sources (or shadows)
    - Reflected (R): from object surface
    - Transmitted or Transparency (T): through transparent object
  - \*  $t_{\min}$ : distance to intersection between ray and bounding volume
  - \* Ways to find  $t_{\min}$
  - \* Basic recursive ray tracing: ray trees

## Terminology

- **Joints**: Parts of Robot / Articulated Figure That Turn, Slide
- **Effectors**: Parts of Robot / Articulated Figure That Act (e.g., Hand, Foot)
- **Bones**: Effectors, Other Parts That Rotate about, Slide through Joints
- **Procedural Animation**: Automatic Generation of Motion via Simulation
- **Ray Tracing aka Ray Casting**
  - \* Given: screen with pixels (  $u$ ,  $v$  )
  - \* Find intersection  $t_{\min}(u, v)$  of rays through each (  $u$ ,  $v$  ) with scene
  - \* Calculate vectors emanating from world-space coordinate of  $t_{\min}$ 
    - Light (L): to point light sources (or shadows)
    - Reflected (R): from object surface
    - Transmitted or Transparency (T): through transparent object
  - \* **Recursive RT**: call raytracer for each intersection found
    - Builds **ray tree** rooted at intersection point
    - Base cases: unobstructed vector to light; depth limit
  - \* **Parallel RT**: use multiple threads/processes for each (  $u$ ,  $v$  ) or  $t$
